The 5BCR2A-7970/550-L is a high-frequency high-performance ceramic filter in a compact surface mount package. Measuring merely 0.540" long by 0.325" wide by 0.120" high, this high-frequency filter achieves high-bandwidth and low insertion loss with consistent performance suitable for mass-production. This solution is highly cost-effective for the 7+ GHz range, and benefits from the excellent temperature stability of ceramics. This product is available approximately 6 weeks after receipt of order. For more information, please contact us at contact@comnav-eng.com.
